

STEVE KEATOR

Web products. Connected systems. Less manual work.

Selected engineering and delivery work

Remote roles and contract engagements

Full-stack products and systems

Web and mobile

React and React Native applications, Next.js web experiences and established CMS platforms.

APIs and data

REST APIs, data consolidation, processing and warehousing, with structured migrations and integrations.

Automation and delivery

Node.js and Python automation. Code review, testing and deployment workflows, with technical leadership.

Product engineering and delivery

Aivre

Lead engineering delivery across React, React Native and Node.js applications, including TypeScript code review and requirements alignment.

SHOP Companies

2025–2026: Contributed to front-end modernization with refreshed layouts, reusable components and improved content-authoring workflows.

Aivre

2026 · Engineering delivery in a fast-paced startup

ENGINEERING COORDINATION

Coordinate work across React, React Native and Node.js applications. Manage dependencies and blockers.

TESTING AND QUALITY

Established development checks and supported mobile build validation.

REVIEW AND PRODUCT ALIGNMENT

Review TypeScript pull requests against requirements. Connect engineering and product to resolve issues.

DELIVERY PRACTICES

Guide testing and release practices through engineering review, documentation and product coordination.

SHOP Companies

Front-end modernization and content workflows

PROBLEM

Refresh the web experience and make content easier to maintain.

ROLE

Contributed hands-on front-end development as part of the delivery team.

APPROACH

Updated page layouts and developed reusable components to support consistent presentation and content authoring.

DELIVERED SCOPE

Updated interfaces and more flexible content-authoring tools.

NIH Clinical Center

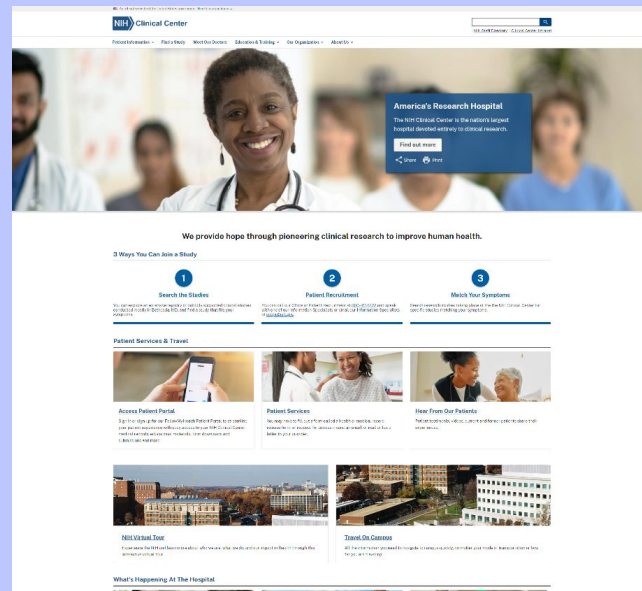

2024 • Technical Architect through Arch Systems

PROBLEM AND CONSTRAINTS

Rebuild the website in Drupal 10 with structured content, staff workflows and federal accessibility requirements.

ROLE

Led technical delivery for an eight-person team from development through launch, including stakeholder reporting.

SOURCE PORTFOLIO / PUBLIC PAGE

Architecture with an editorial handoff

Drupal 10 rebuild and migration

APPROACH

Designed the content model, custom Paragraph types and role-based editorial workflows. Oversaw RESTful and Entity API integrations with external data.

ACCESSIBILITY

Work targeted WCAG 2.1 AA and included tools to help authors identify content issues.

DELIVERED SCOPE

A rebuilt platform supported by written documentation, video tutorials and administrator training for NIH staff.

Charles Schwab accessibility tools

2020 · Contract developer through Apex Systems

PROBLEM

Developers needed site-wide issue discovery. Content creators needed feedback on individual pages.

ROLE AND APPROACH

Built a Node.js command-line scanner using headless Chrome and axe-core, plus a Drupal module for in-page review.

DELIVERED SCOPE

CSV reporting for developers. Configurable page regions, issue details and in-page highlighting for authorized content users.

BOUNDARY

Automated checks identify a subset of accessibility issues and complement manual testing.

Panda Express

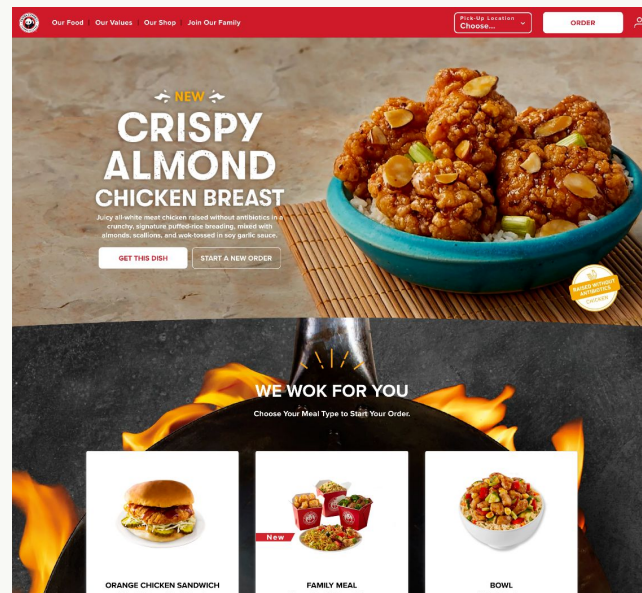

2021 · Full Stack Developer at Hathway

PROBLEM AND ROLE

Drupal 9 rebuild with NomNom ordering integration. Dedicated full-stack developer on the project.

APPROACH AND RESULT

Created Paragraphs components and restaurant-location features connecting editable content, synchronized store data and store-specific ordering menus.

SOURCE PORTFOLIO / PUBLIC PAGE

New York State Senate

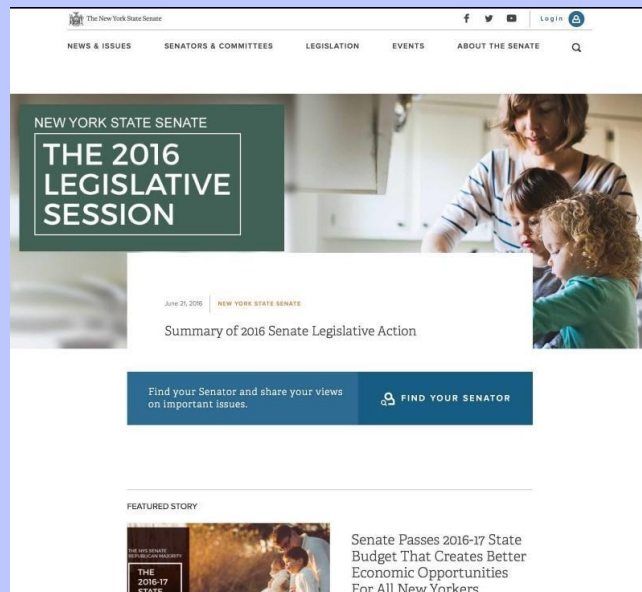

2014–2016 · PHP and Drupal Programmer

PROBLEM AND ROLE

Preserve legislative and editorial content during a Drupal 6-to-7 rebuild. Managed migration of more than 100,000 content nodes.

APPROACH AND RESULT

Built editorial comparison and preview tooling. Implemented bill views generated in batches and refreshed when legislative data changed.

Content systems for editors

National Museum of Play · Fruition · 2019

PROBLEM

Give administrators a way to build landing pages without recreating each layout in code.

ROLE

Created a custom content type, Paragraphs components and their templates.

APPROACH AND RESULT

Editors could arrange HTML, slideshows, video and calls to action linked through entity references. One component integrated a Vue.js application.

DELIVERED SCOPE

A reusable component system for landing-page authoring.

A foundation beyond one platform

Sunmark Credit Union · 2011–2014

WordPress website overhaul, device-aware product pages, analytics and targeted marketing workflows.

Mannix Marketing · Projects in 2010–2011

Custom CMS, scheduling and payment functionality, plus a service-ticketing system with external integrations.

Media Logic · Project in 2008

Lead developer for Zeitgeist & Coffee, primarily responsible for the back end of the social media management application.

AI within product delivery

AI-assisted engineering

Explore architecture, prototype, write code and improve documentation with experienced technical review.

Applied AI offering

Build products and workflow integrations that use AI, with clear review and exception paths.

Implementation foundation

API integrations, repeatable migrations and deployment automation support the implementation.
